Pilot-Operated REGULATORS

Temperature Pilot	<b>PT</b>
Pilot Body Material	<b>Ductile Iron</b>
Max Inlet Pressure	<b>300 PSIG</b>
Temperature Control Range	<b>60-300°F</b>
Steam Inlet Pressure Range (Standard) (when Standard Temperature Pilot is used with <b>HD Standard</b> main valve)	<b>15-300 PSIG</b>

#### Typical Applications

The PT-Temperature Pilots are used with the HD regulator to control temperature in various processes and systems. Some examples are: oil heaters, ovens, process heaters, vats, dryers and jacketed kettles. Thermostatic sensing bulb comes with standard 8-ft. or 15-ft. capillary lengths. Temperature adjustment is accomplished by rotating an adjustment knob to the desired temperature setting.

The **HD** Regulator can be used with both the **PP-Pressure Pilot** and **PT-Temperature Pilot** simultaneously to limit pressure and control temperature in process applications.

Using both the temperature and pressure pilots on the same regulator eliminates the need for two separate regulators to control temperature and pressure.

#### Features

**All Sensing Bulbs are Copper**

Dimension (inches)

**PT**

Plain copper sensing bulb that is directly immersed into the fluid. Normally the PT bulb type is lowered down vertically into the top of a tank or vat to a desired vertical insertion depth.

**PTU**

Copper sensing bulb with Union connection allowing it to be screwed into the side of a tank or pipe. The sensing bulb is in direct contact with the process fluid. Sensing bulb can be removed by unscrewing union nut (union hub remains in place).

**PTUBW & PTUSW (PTU style copper sensing bulb with Thermowell)**

PTUBW: Brass Well  
PTUSW: 316L SS Well

The Isolation Well, which isolates the copper sensing bulb from the process fluid, is available in either Brass or 316L Stainless Steel. Sensing bulb can be removed by unscrewing union nut. Union Hub & Isolation Well remain in place which allows the removal of the sensing bulb without having to drain the tank. Stainless Steel Isolation Wells are used to protect the copper sensing bulb from corrosive fluids. Brass wells have better heat transfer.

**PTBW & PTSW (PT style copper sensing bulb with Extended Length Thermowell)**

PTBW: Brass Well  
PTSW: 316L SS Well

**For deeper & variable insertion depths into tanks or vats; up to 18" deep.** The extended length Isolation Well isolates the copper sensing bulb from the liquid and allows the copper sensing bulb insertion depth to be adjusted to a depth of up to 18". They are available in either Brass or 316L Stainless Steel. Isolation Well remains in place which allows the removal of the sensing bulb without having to drain the tank.

PT-Temperature Pilot

#### Controlling Temperature

PT-pilot is used for temperature control when steam is used on heating applications. The PT style pilot is a "solid liquid fill" design made up of a temperature probe connected by a length of capillary tubing to a bellows in the pilot valve. When the temperature bulb is heated the liquid inside the probe expands the bellows and closes off the pilot valve. The opening and closing of the pilot controls the flow of steam thru the main valve; which maintains system temperature. PT-pilot controls temperature through a range of 60-300°F.

An overheat protection bellows is incorporated into sensing bulb.

### Controlling Temperature and Limiting Pressure using PT-Temperature Pilot & PP-Pressure Pilot

#### HD Main Valve

with  
• PP-Pressure Pilot  
• PT-Temperature Pilot

#### Controlling Temperature & Limiting Pressure to a Maximum Value

The PT & PP Pilots combination is used when it's required to control **temperature** while limiting **downstream pressure** to a maximum value. When the PT & PP Pilots combination is used, the downstream pressure is limited to a maximum setting by the pressure pilot, while the temperature pilot maintains the correct temperature of the process. This eliminates the need for a separate pressure reducing valve.
